

Part - B

Category

mongodump

Action

tool for backup and snapshots

Example

Dumps are stored in 'BSON' format & are restored using 'mongorestore',

Default path : current_path/dump/...<folders for each database>.../...<bson file for each collection> & <json file for storing metadata for each bson file>...

1. It's used to dump all collections of all database

```
mongodump -h smgo7db01.smu.edu:27017 -u <username> -p <pswr> --authenticationDatabase <dbname>
```

2. It's used to dump all collections of the database provided as inline parameter (-d)

```
mongodump -h smgo7db01.smu.edu:27017 -u <username> -p <pswr> -d <dbname> --authenticationDatabase <dbname>
```

3. It's used to dump a collection of the database provided as inline parameters (-d & -c)

```
mongodump -h smgo7db01.smu.edu:27017 -u <username> -p <pswr> -d <dbname> -c <collectionname> --authenticationDatabase <dbname>
```
