Quest2: Basic Python with Regex, Files, Urls

Download from Canvas:
- regexFilesUrlsQuest.py
- test_ regexFilesUrlsQuest.py

Your mission is to pass all the tests in test_ regexFilesUrlsQuest.py
The test program will run several tests on each of the functions you need to write. You test your code by executing **pytest**.

Run pytest
Be sure to have your code file and the test file in the same directory

At your command prompt (Lyle, Windows or MAC) simply type: pytest -x
- Pytest will search your directory for test_ functions and execute them
- The -x option means stop after first failure. This is recommended. Work on passing one test at a time.

Work on each test until you have all dots indicating success

When Done …

Upload TWO files to Canvas: Quest2 Link
1. A PDF with:
    a. Class Header Information
    b. Source code (not the test code) neatly formatted (no line wrap)
    c. Output of your test results

2. A ZIP file with:
    a. the above PDF file
    b. source code (.py file)
    c. test code (.py file)

.
